Testing Guide: Asset & Service Management Flow

Overview

Tracks company-owned assets and handles maintenance or external servicing.

Components to Test

Assets, Categories, Allocations, Depreciations, Maintenances, Disposals, Service Requests, Technician Visits.

Step-by-Step Manual Testing

1. **Asset Lifecycle**

    - Go to `Asset Categories` -> Create a category (e.g., 'Sewing Machines').
    - Go to `Assets` -> Register a new machine with its purchase value and date.
    - Go to `Asset Allocations` -> Allocate the machine to a specific Branch or Employee.
    - Go to `Asset Depreciations` -> Run a depreciation cycle.
    - **Check:** Verify the asset's current book value decreases correctly based on the depreciation method.

2. **Maintenance & Servicing**

    - Go to `Asset Maintenances` -> Schedule a routine maintenance for the machine.
    - Go to `Service Requests` -> Log a breakdown ticket.
    - Go to `Technician Visits` -> Assign a technician and log their visit details and resolution.
    - **Check:** Ensure the service request status changes to 'Resolved'.
